

SPRINGFIELD

NEBRASKA

****MANDATORY REQUIREMENT****

All City of Springfield water customers **MUST** complete this survey per the State of Nebraska.

The City of Springfield is now required by the Nebraska Department of Environment & Energy to conduct a survey regarding water service lines that contain lead.

We've made it easy for you to respond online by scanning the QR Code to the right!

You can also fill out the form on the back of this sheet and return it promptly to City Hall.

For more information on why this is a requirement, as well as how to tell if your service line is affected, please contact Heath Shemek, Water Operator, at 402-253-2992. You can also visit us online at springfieldne.org under Departments, Public Works, Water to learn more about the harmful effects of lead in drinking water.

Types of water pipes

Follow the guidance below or contact a licensed plumber to determine the material of your water pipes. To identify the material of your service pipe material on private property, check your household water service connection, typically located in the basement.

Homeowners should identify and replace old household pipes, particularly galvanized plumbing and sources of lead. The type of household plumbing can vary throughout your household.

Lead

A dull, silver-gray color that is easily scratched with a coin. Use a magnet - strong magnets will *not* cling to lead pipes.

Galvanized

A dull, silver-gray color. Use a magnet - strong magnets *will* typically cling to galvanized pipes.

Copper

The color of a copper penny.

Plastic

White, rigid pipe that is joined to water supply piping with a clamp.

Please answer the following questions:

Full Name: _____
